

The Good Earth (McConnell) McGraw-Hill

- A
- Ablation zone, 454–455
- Abrasion, 296
- Absolute hardness scale, 182, 183
- Absolute humidity, 392
- Absorption, of solar energy, 387
- Abyssal plains
 - basic features of, 80–81
 - features of, 348
- Accumulation zone, 454
- Acid mine drainage, 248–249
- Acid rain, 68, 243, 246, 248
- Aconcagua, Mount, 164
- Active margins, 92
- Adelman, Ken and Gabrielle, 345
- Adiabatic lapse rate, 395–396
- Aerosols, 491–492
 - in Earth's atmosphere, 381
- African plate, 89, 90, 91
- Aftershocks, 128
- Agriculture
 - conservation tillage, 263–264, 501
 - Dust Bowl and, 262–263
 - global warming effects, 498
 - impact on wetlands, 338
 - irrigation for, 328, 329, 332
 - Nile valley, 286–287
 - overdraft from aquifers, 332–333
 - in rain forest, 257
 - soil erosion and, 239, 262–263
- A horizon, 256, 257
- Air, 381. *See also* Atmosphere (Earth's)
- Air blast, 58, 66, 68
- Air density, 394–395
- Air masses
 - convergence lifting, 401
 - defined, 414
 - density lifting, 399–400
 - frontal lifting, 400
 - fronts and, 416
 - modification of, 415–416
 - orographic lifting, 400
 - source areas, 414
 - types of, 414–415
- Air pressure. *See* Atmospheric pressure
- Alaska earthquake, 113, 123
- Albedo, 387
 - defined, 387
 - of different surface types, 388–389
 - impact on surface temperature, 390
 - sea ice melting effects and, 442
- Aleutian Islands, 99, 144
- Alfisols, 259
- Allegheny River, 289, 290
- Alpine glaciers, 453–454
- Alternative energy sources
 - biomass, 452–453
 - geothermal power, 46
 - to reduce greenhouse gas emission, 500–501
 - solar power, 37, 501
 - wave energy, 369
 - wind power, 381, 405–406, 501
- Altocumulus clouds, 398, 399
- Aluminum, as common element, 176
- Aluminum ore, 205
- Alvarez, Luis, 14
- Alvarez, Walter, 14
- Alvarez Hypothesis, 14–15
- Amazon River
 - discharge, 295
 - evolution of, 292
 - gradient, 294
 - stream load, 297–298
- Amphibole, 176, 177
- Anders, William, 1
- Andesite, 186, 187, 190
- Andesitic magma, 143–144, 146–147, 187
- Andes Mountains, 292
 - formation at plate boundaries, 165–166
- Andisols, 259
- Angkor Wat, 238, 253–255
- Animals
 - as energy consumers, 451–452
 - evolution and oxygen levels, 382–383
 - in food chain, 451–452
 - global warming effects on, 498
 - natural earthquake warning system, 122
 - weathering by, 250, 253
- Anion, 178
- Antarctica, 453, 457
 - glaciation of, 358
- Antarctic ozone hole, 476, 480–481
- Antarctic plate, 89, 91
- Antarctic Ridge, 81
- Anthracite, 198
- Anthropocene, 21
- Anticyclones, 404–405
- Apatite, 182
- Apollo 8* spacecraft, 1
- Apophis, 70
- Apophis asteroid, 54
- Appalachian Mountains, 272
- Aquifer
 - confined, 324–325
 - defined, 321
 - High Plains aquifer, 332–333
 - inflow vs. outflow, 325–327
 - map of, in U.S., 322
 - open, 323–324
 - recharge zones, 324, 325
 - water table, 323–324
- Arabian plate, 89, 91
- Arabian Sea, 194
- Archean eon, 222
- Arctic Ocean, 352
- Arctic region, 451
 - melting glaciers, 440–442
 - sea ice melting effects, 442–443
- Argon, in Earth's atmosphere, 381
- Aridisols, 259
- Aristarchus, 26
- Aristotle, 26, 412
- Arsenic, in groundwater, 334–335, 336
- Artesian aquifers, 324–325
- Artificial beach nourishment, 374–376
- Asaro, Frank, 14
- Assateague Island, 370, 371
- Asteroid belt, 41, 55

The Good Earth (McConnell) McGraw-Hill

- Asteroids. *See also* Meteorites
collision with Earth, 14–15, 20, 54, 227, 228
impact craters, 61–63
origins and features, 55–56
predicting and assessing impact, 69–70
- Asthenosphere, 45
basic features of, 88
- Astronomical unit, 38
- Atlantic Ocean, 96
- Atmosphere (Earth's). *See also* Climate
air defined, 381
air pressure, 394–397
carbon cycle, 484, 486–487
cloud formation and precipitation, 397
clouds and frontal systems, 397–401
evolution of, 381–383
global air circulation, 443–447
Greenhouse Effect, 390
harnessing of solar energy by, 385–390
layers of, 384–385
ozone formation and role in, 478–479
protection by magnetic field, 36, 48
protective effects of, 49–50, 380, 478–479
solar radiation and, 385–390
structure and processes of, 383–385
support of life, 50
water's role in, 390–392
wind development, 401–406
- Atmosphere of Mars and Venus, 50, 381–382
- Atmospheric pressure
air density and, 394–395
cyclones and anticyclones, 404–405
defined, 394
regional pressure gradient, 402
relation to latitude, 445–447
in relation to temperature, 395–396
wind development and, 401–402
- Atomic bonds, 178–180
- Atomic number, 177, 228
- Atoms, 177–180
bonds, 177–180
components of, 177–178
relation to rocks and minerals, 184
- Auillard, 322
- Aurora, 36, 37
- Aurora Australis, 385
- Aurora Borealis, 385

 natural causes of, 470–472
 polar bear diet and, 440–442
 records of, 460–470
 sea ice melting effects, 442–443
 short-term trends, 463–466
Climate Change Convention, 498
Climate Change Science Program, 20–21
Climate forcing, 491
Clouds
 classification of, 398–399
 at cold fronts, 418
 condensation and formation of, 397
 formation process, 397–398, 399–401
 global distribution of and climate, 444, 446
 at occluded fronts, 420
 solar radiation and, 398, 492
 with thunderstorms, 421–422
 at warm fronts, 419
Coal, 500
 coal-bearing areas in U.S., 198
 formation, 196–197
Coastal wetlands, 338
Coastlines
 dynamic nature of, 345
 effects of waves on, 366–369

The Good Earth (McConnell) McGraw-Hill

- Coastlines (*Continued*)
 - erosion of, 369, 370–371
 - erosion prevention strategies, 374–376
 - features of, 370–373
 - sediment budget, 373–374
 - sediment transport and deposition, 372–373
- Coccolith, 196
- Coccolithophores, 196
- Coconino Sandstone, 221
- Cohesion, of sand, 271
- Cold climates, 453–458
- Cold front, 400, 416
 - weather changes with, 417–418
- Collision coalescence, 397
- Color
 - of igneous rocks, 186–187
 - of minerals, 183
- Colorado River, 217, 234, 289, 325
 - erosion by, 296
 - velocity of, 294
- Columbia River plateau, 163
- Comets, 40, 57–60
 - collisions with, 57–58
 - composition of, 59
 - impact craters, 61–63
 - long-period, 60
 - number of, 58
 - predicting and assessing impact, 69–70
 - short-period, 59–60
 - types of, 59–60
- Complex crater, 61–62, 63
- Composite cone, 161
- Computer models of climate change, 492–493
- Concentration factor (CF), 203–204
- Condensation
 - cloud formation and, 397
 - in hydrologic cycle, 288
 - role in maintaining Earth's atmosphere, 391–392
- Conduction, 47
- Cone of depression, 328
- Confined aquifers, 324–325
- Conservation
 - of energy, 499–500
 - of soil, 263–264
- Conservation Reserve Program, 264
- Conservation tillage, 263–264, 501
- Conservative plate boundaries, 100
- Contact metamorphism, 199–200
- Continental Arctic/Antarctic air mass, 414
- Continental crust
 - age of, 82
 - density of, 166
 - elements most common in, 176, 179
 - rhyolitic magma and, 147
- Continental divide, 291
- Continental drift theory, 76, 77–80
- Continental glaciers, 453
- Continental polar air mass, 414
- Continental rise, 348
- Continental shelf
 - as continental drift evidence from, 78
 - features of, 347–348
- Continental slope, 348
- Continental tropical hot, dry air mass, 414
- Continents
 - distribution of, and climate change, 470–471
 - ocean currents and, 357–358
 - temperature of, compared to oceans, 443, 446
- Contracting Earth model, 77, 79, 80
- Contrails, 397–398
- Convection, 47
- Convection cells, 446, 447
- Convention Concerning the Protection of the World Cultural and Natural Heritage, 238
- Convergence lifting, 401
- Convergent plate boundaries
 - basic features of, 96–100
 - location of, 90–91
 - mountain formation, 97–100, 164–166
 - reverse faults at, 112–113
 - volcanoes associated with, 97–98, 99, 144, 146–147, 161
- Cool temperature climate region, 449
- Copernicus, Nicolas, 26
- Copper ore, 204
- Coquina, 197
- Coral reef, 196
- Corals, 221
- Core, Earth's, 45–48
- Coriolis effect, 356–357, 403, 429, 446, 447
- Corundum, 182
- Cosmic radiation, 31, 385. *See also* Solar radiation
- Covalent bond, 179, 180
- Craters
 - complex, 61–62, 63
 - distribution and frequency of, 62–63
 - impact, 61–63
 - simple, 61, 63
- Creep, 281–282
- Creep meters, 114
- Crest of wave, 365
- Cretaceous-Tertiary extinction, 227
- Crevasses, 454
- Crinoid, 221, 223
- Cross-cutting relationships, principle of, 214
- Cross-sectional area of streams, 294–295
- Crust, Earth's
 - beneath mountains, 166
 - composition of, 45–48
 - density of, 166
 - of oceans versus continents, 82
 - thickness of, 100, 164
- Crutzen, Paul, 21, 480

Dikes, igneous, 185

Dinosaurs

Alvarez Hypothesis, 14–15

extinction of, 14–15, 224, 227

low-oxygen environment of, 383

Diorite, 186, 190

Dirt, composition of, 239. *See also* Soil

Discharge, of groundwater, 326–327

Dissolution, 243–247

Dissolved load, 297

Diurnal tides, 364

Divergent plate boundaries

basic features of, 95–96

location of, 90–91

normal faults at, 112

volcanoes associated with, 144, 145–146

Dobson, G. M. B., 479

Dobson units (DU), 479

Doppler effect, 28–29

Doppler radar, 413

Downdrafts, thunderstorm formation, 422

Drainage basin, 290–291

Drainage patterns, 292–293

Drinking water

contamination of, 316–317, 334–337

sources of, 316–317

Dropstone deposit, 458

Dry climate region, 449

Dunes, sand, 460

Dust

in comets, 59

raindrop formation and, 397

star formation from, 31, 32, 33

from wind erosion, 260, 262–263

Dust Bowl, 262–263

Dwarf planets, 38–39

E

Earth

age of, 210, 212, 228

albedo, 387–389

area covered by oceans, 344

atmosphere of, 48, 49–50

bilevel surface of, 76

as center of universe in early thought, 26–27

conditions favoring life, 48–50

core, mantle and crust of, 45–48

energy budget of, 386–390

evolution of early, 222

geothermal gradient of, 46

impact craters, 61, 62–63

magnetic field of, 36, 45, 48, 50

magnetic field of, and solar wind, 36

orbit of, 471–472

seasons of, 42–45

size and position in solar system, 38–41

as terrestrial planet, 37, 38, 40

Earthquakes, 106–135

aftershocks, 128

building codes for resistance, 106–107, 109–110

as cause of 2004 and 2011 tsunamis, 4–6

determining location and magnitude of, 120–121

distribution of, 83

elevation changes and liquefaction, 129

epicenter of, 120–121

evidence for past occurrences, 107–110

experiencing, 106–107

faults and, 108, 110–114

features of, 111–112

ground shaking from, 127–128

hazards caused by, 126–134

high-risk locations for, 114–117

human toll and economic cost of recent, 6

intensity of, 122, 124–126

landslides, 128–129

magnitude of, 122–124

measuring, 122–126

megathrust, 108, 109

naming, 111

at oceanic ridge and trenches, 83, 84

plate tectonics and, 92

recurrence interval, 114

seismic waves and, 117–120
